- Wood/Coal Stoves

ANIMAL/ BIRD REMOVAL

We specialize in the removal of critters from your chimney – UNHARMED.

BELLFIRE FIREPLACES

The Bellfire Refractory Fireplace is a wonderful alternative to a woodstove for heating your living space. The state of the art design allows the open face fireplace to “heat like a woodstove” while maintaining the aesthetics of a fireplace. We replace rotted, deteriorated metal heatolator fireplaces with the Bellfire.

BRICK CLEANING

Irish Sweeps Chimney Ltd. can clean stained and dirty bricks and stones both inside, near the fireplace and outside on the chimney.

CHIMNEY CAPS/ SPARK ARRESTORS

All of our chimney caps have a lifetime guarantee. They are available in custom sizes and shapes as well as copper and stainless steel.

CHIMNEY POTS/ ORNAMENTAL COPPER CAPS

Many homeowners opt for the upscale look of the European Copper Chimney Pot. There is also the traditional clay chimney pot. Irish Sweeps installs this with a stainless grating to stop critters and birds from entering your chimney.

COPPER/ ALUMINUM FLASHING

Irish Sweeps Chimney Ltd. offers installation and repair of chimney step and top flashing. We also install flashing cricket behind the chimney. Many water issues in your home are related to the chimney flashing.

DRYER VENT EXHAUST

Dryer vent connectors are removed, brushed and vacuumed, utilizing a special rotating brush. We test the draft and inspect the system. We carry a full line of hoods, hose, and venting pipes.

FIREBOX REPAIR

The firebox of the fireplace is the place where you burn the wood fire. The firebox should be surrounded by the fire brick to withstand the extreme temperatures generated during a fire. Quite often these blazing temperatures will disintegrate the fire brick and more often the mortar between the fire bricks. We replace and/or repair the damage with a high temperature refractory cement to insure the firebox is safe.

FIREPLACE

We sweep, brush and vacuum the chimney, smoke chamber, and firebox. NO MESS – we utilize drop cloths and runners as needed. We also include a Level I inspection.

GAS CHIMNEY

The cleaning process includes brushing the chimney with properly sized brushes. We remove the smoke pipe, brush and vacuum the pipe work, shovel and vacuum the breech and reseal the pipe work to the wall. The procedure also includes a full Level I inspection to ensure the venting system and chimney are up to National Fire Protection Association (N.F.P.A.) 211 code.

GLAZED CREOSOTE REMOVAL

Wood burners (especially wood stoves) may experience severe creosote (the by-product resulting from burning wood) build-up in the chimney system. This dangerous flammable substance will coat the chimney system. 2nd and 3rd degree creosote could result.

HEARTH/ FIREPLACE ACCESSORIES

Irish Sweeps sells and installs fireplace accessories and hearth equipment. See our catalog.

INSPECTIONS/ CONSULTATIONS/ ESTIMATES

New Homeowners, Realtors, Architects, and Plumbers, etc. – We offer Level I, II, and III inspections of residential homes. We will diagnose and complete estimates for work needed on your chimney. Residential or commercial, take advantage of our many decades of experience (established 1974) and call for a free estimate or consult.

KEYSPAN/ NATIONAL GRID SHUT-OFFS CORRECTED

Natural Gas is wonderful – until the carbon monoxide detector goes off. We can diagnose and correct the problem in the chimney in a timely fashion.

MASONRY RESTORATION

Masonry chimneys on Long Island are subjected to severe weather conditions, and oft times require repairs within the first 6 – 10 years of age. We have a full staff of masons to accomplish any restoration and repairs on your chimney and interior fireplace.

OIL CHIMNEY

The cleaning process includes brushing the chimney with properly sized brushes. We remove the smoke pipe, brush and vacuum the pipe work, shovel and vacuum the breech and reseal the pipe work to the wall. The procedure also includes a full Level I inspection to ensure the venting system and chimney are up to National Fire Protection Association (N.F.P.A.) 211 code.

PRE-FAB CHIMNEY INSTALLATION

Prefabricated chimneys are factory-built chimney systems which are assembled and installed on the jobsite. We offer a full line of prefab chimneys including CLASS-A, B-Vent, PELLET CHIMNEY, and DOUBLE WALL STOVE PIPE. We install everything we sell. Most products come with a lifetime guarantee. We offer larger commercial size chimneys. We also install aluminum/stainless brick-look housings and textural “real-look” brick housings.

RELINING OF CHIMNEYS – UL LISTED

Chimneys deteriorated by age, fire, water, or improper installation may need to be relined. Relining basically is the process of re-sleeving an existing chimney rather than demolishing it and rebuilding a totally new one. There are many differing products available for relining – many of them can have questionable longevity. Irish Sweeps Chimney Ltd. has redone many jobs relined improperly (not to code, or inferior product). We utilize ONLY hi-grade 316 – L stainless steel or better. All work is done to National Fire Protection Association codes (N.F.P.A. 211, etc.) or better. We guarantee all our work and we were established in 1974 and will be around for many more years to come. CONSUMER NOTE: A GUARANTEE IS USELESS IF THE COMPANY INVOLVED IS GONE OR UNDER A NEW NAME.

SMOKE CHAMBER RESTORATION – SMOKETITE

The smoke chamber (above the damper) of a fireplace can be on of the most problematic parts of the fireplace and a very common source of a chimney fire due to its proximity to the heat from the firebox. We utilize a special hi-temp ceramic process (Smoketite TM) which repairs, insulates and seals the smoke chamber with a smooth ceramic. This ceramic can be applied with no expensive demolition to the original fireplace.

SMOKING/SMELLING FIREPLACES/DRAFT PROBLEMS

What causes these problems? The answer involves many different and divergent causes and solutions too numerous and lengthy to delineate here. Suffice it to say – if you have one of these problems we can solve it! Irish Sweeps has been solving chimney problems since 1974. see: www.chimneyfans.com

STAINLESS CHASE COVERS

A chase cover is the square metal cover piece that fits over the top of a chimney housing or chase. A chase cover has one or more holes in it to allow the chimney or chimneys to protrude through. Unfortunately original equipment rarely, if ever, is a non-corrosive material and normally will develop rusting, stains and leaks. Our chase covers are 100% stainless steel and come with a Lifetime Guarantee. Also available in copper.

STORM DAMAGE REPAIRS

When mother nature strikes – we are ready! Lightening, wind, rain, ice, snow, and tree damage may need fast response and repair. At Irish Sweeps we specialize in storm repair.

WATERPROOFING AND WATER LEAK DIAGNOSIS

Water entering a house near the chimney may occur for countless different reasons. We specialize in leak detection and diagnosis. After many decades in the industry we have seen it all and we will be able to fix your water leak. We also offer a 10-year guaranteed waterproof treatment which does not discolor or change the look of your brick or masonry chimney.

WOOD/COAL STOVES

SOLID FUEL burning stoves require special servicing. We offer a complete stove service, as well as, cleaning of the pipe work and chimney. Our technicians carry gaskets, smoke pipes and replacement parts for many stoves.
